

The Environment ...

Burke Flooring is committed to providing quality flooring products that consider the best use of natural resources and the long-term impact on the environment. To that end, we have established the following corporate directive:

“All new flooring products introduced to the market will include the use of sustainable and/or recycled materials”.

Concurrent with this initiative we will work to reengineer our existing products to meet these same criteria. This reflects a commitment to the environment and one that both challenges and excites our team.

Burke’s business philosophy has always been to provide clear and factual information about our products

To simplify this process, we are introducing a new environmental symbol throughout our literature to identify products that contain a minimum of 10% recycled content and can contribute toward LEED qualification points.

The first product to receive this seal is EcoScore Multi-purpose Sports Floor Tile. This product contains more than 60% post consumer recycled content and is, in our opinion, the most environmentally responsible, high performance sports floor tile on the market.

We encourage you to visit our website at <http://www.burkeflooring.com> for the latest product information as we move forward in reengineering our product offering to meet our environmental commitment.
